

HSBC GIF Global Bond Total Return Fund

Fund Overview

For professional clients only

★★★★★
Morningstar Rating™
February 2021

Why use a global bond total return strategy?

- ◆ Fixed income investors need to look for innovative solutions to achieve their investment objectives; employing a core allocation which dynamically exploits the best ideas across all environments and economic cycles will prove invaluable
- ◆ A multi-sector, flexible approach that breaks away from traditional benchmark constraints and maximises the full fixed income investment toolkit
- ◆ Dynamically managing duration and credit exposures provides the versatility to generate attractive return and income regardless of the ever-changing economic environment

Why allocate now?

- ◆ An unconstrained, total return strategy is the optimal expression of global fixed income investing in the current uncertain and low yield environment
- ◆ Investors are not being adequately compensated for taking traditional fixed income long maturity/duration exposure, and need to break away from the limitations of a benchmark
- ◆ With the compression in fixed income yields and with income becoming harder to deliver, investors should look towards incorporating a total return solution to achieve their income goals

Key Risks

The value of investments and any income from them can go down as well as up and investors may not get back the amount originally invested

- ◆ **Exchange rate risk.** Investing in assets denominated in a currency other than that of the investor's own currency perspective exposes the value of the investment to exchange rate fluctuations
- ◆ **Derivative risk (leverage).** The value of derivative contracts is dependent on the performance of an underlying asset. A small movement in the value of the underlying can cause a large movement in the value of the derivative. Over-the-counter (OTC) derivatives have credit risk associated with the counterparty or institution facilitating the trade. Investing in derivatives involves leverage (sometimes known as gearing). High degrees of leverage can present risks to sub-funds by magnifying the impact of asset price or rate movements
- ◆ **Asset backed securities (ABS) risk.** ABS are typically constructed from pools of assets (e.g. mortgages) that individually have an option for early settlement or extension, and have potential for default. Cash flow terms of the ABS may change and significantly impact both the value and liquidity of the contract
- ◆ **Emerging market fixed income risk.** As interest rates rise, debt securities will fall in value. Emerging economies typically exhibit higher levels of investment risk. Higher yielding securities are more likely to default
- ◆ **Contingent Convertible Security (CoCo) risk.** Hybrid capital securities that absorb losses when the capital of the issuer falls below a certain level. Under certain circumstances CoCos can be converted into shares of the issuing company, potentially at a discounted price, or the principal amount invested may be lost
- ◆ **Operational risk.** The main risks are related to systems and process failures. Investment processes are overseen by independent risk functions which are subject to independent audit and supervised by regulators
- ◆ **Counterparty Risk** The possibility that the counterparty to a transaction may be unwilling or unable to meet its obligations.
- ◆ **Credit Risk** A bond or money market security could lose value if the issuer's financial health deteriorates.
- ◆ **Interest Rate Risk** When interest rates rise, bond values generally fall. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality
- ◆ **Default Risk** The issuers of certain bonds could become unwilling or unable to make payments on their bonds

For more detailed information on the risks associated with this fund, investors should refer to the prospectus of this fund

Important Information

This presentation is distributed by HSBC Global Asset Management (France) and is only intended for professional investors as defined by MIFID. The information contained herein is subject to change without notice. All non-authorised reproduction or use of this commentary and analysis will be the responsibility of the user and will be likely to lead to legal proceedings. This document has no contractual value and is not by any means intended as a solicitation, nor a recommendation for the purchase or sale of any financial instrument in any jurisdiction in which such an offer is not lawful. The commentary and analysis presented in this document reflect the opinion of HSBC Global Asset Management on the markets, according to the information available to date. They do not constitute any kind of commitment from HSBC Global Asset Management. Consequently, HSBC Global Asset Management (France) will not be held responsible for any investment or disinvestment decision taken on the basis of the commentary and/or analysis in this document. All data from HSBC Global Asset Management (France) unless otherwise specified. Any third party information has been obtained from sources we believe to be reliable, but which we have not independently verified.

Synthetic Risk and Reward Indicator (SRRI) * : 3/7. The rating is based on price volatility over the last five years, and is an indicator of absolute risk. Historical data may not be a reliable indication for the future. The rating is not guaranteed to remain unchanged and the categorisation may shift over time. The lowest rating does not mean a risk-free investment. The value of investments and any income from them can go down as well as up and investors may not get back the amount originally invested. Where overseas investments are held the rate of currency exchange may also cause the value of such investments to fluctuate. Investments in emerging markets are by their nature higher risk and potentially more volatile than those inherent in some established markets. Stock market investments should be viewed as a medium to long term investment and should be held for at least five years. Any performance information shown refers to the past and should not be seen as an indication of future returns.

HSBC GIF Global Bond Total Retrun is a sub fund of HSBC Global Investment Funds, a Luxembourg domiciled SICAV. Before subscription, investors should refer to Key Investor Document (KIID) of the fund as well as its complete prospectus. For more detailed information on the risks associated with this fund, investors should refer to the complete prospectus of the fund. Shares of the Company may not be offered or sold for sale or sold to any "U.S. Person within the meaning of the Articles of Incorporation, i.e. a citizen or resident of the United States of America (the "United States"), a partnership organised or existing under the laws of any state, territory or possession of the United States, or a corporation organised or existing under the laws of the United States or of any state, territory or possession thereof, or any estate or trust, other than an estate or trust the income of which from sources outside the United States is not includible in gross income for purposes of computing United States income tax payable by it. The fund uses the swing principle calculation method which determines the net asset value of the fund. Swing pricing allows investment funds to pay the daily transaction costs arising from subscription and redemptions by incoming and outgoing investors. The aim of swing pricing is to reduce the dilution effect generated when, for example, major redemptions in a fund force its manager to sell the underlying assets of the fund. These sales of assets generate transaction costs and taxes, also significant, which impact the value of the fund and all its investors. The fund has a redemption threshold (gate), the level at which the manager of an undertaking for collective investment in transferable securities can stagger the redemption of securities instead of proceeding immediately.

All subscriptions in any fund presented in this document are accepted only on the basis of the current prospectus, available on request from HSBC Global Asset Management (France). Important information for Luxembourg investors: HSBC entities in Luxembourg are regulated and authorised by the Commission de Surveillance du Secteur Financier (CSSF).

Important information for Swiss investors: This document may be distributed in Switzerland only to qualified investors according to Art. 10 para 3. 3bis and 3ter of the Federal Collective Investment Schemes Act (CISA). The presented fund is authorised for public distribution in Switzerland in the meaning of Art. 120 of the Federal Collective Investment Schemes Act. (Potential) investors are kindly asked to consult the latest issued Key Investor Information Document (KIID), prospectus, articles of incorporation and the (semi-)annual report of the fund which may be obtained free of charge at the head office of the representative: HSBC Global Asset Management (Switzerland) Ltd., Gartenstrasse 26, P.O. Box, CH-8002 Zurich. Paying agent: HSBC Private Bank (Suisse) S.A., Quai des Bergues 9-17, P. O. Box 2888, CH-1211 Geneva 1.

HSBC Global Asset Management (France) - 421 345 489 RCS Nanterre. Portfolio management company authorised in France by the French regulatory authority AMF (no. GP99026) with capital of 8.050.320 euros, in Italy, Spain and Sweden through the Milan, Madrid and Stockholm branches of HSBC Global Asset Management (France), regulated respectively by Banca d'Italia and Commissione Nazionale per le Società e la Borsa (Consob) in Italy, the Comisión Nacional del Mercado de Valores (CNMV) in Spain and the Swedish Financial Supervisory Authority (Finansinspektionen) in Sweden.
