

HSBC Global Liquidity Funds Plc

HSBC Sterling ESG Liquidity Fund

Marketing communication | Monthly report 30 September 2025 | Share class H

Investment objective

The Fund aims to provide security of capital, daily liquidity and an investment return that is similar to Sterling denominated money markets interest rates while considering select environmental, social and governance (ESG) criteria. The Fund is classified under Article 8 of SFDR.

Investment strategy

The Fund is actively managed.

The Fund will invest in a diversified portfolio of short-term securities, instruments and obligations with an additional focus on the performance of the underlying issuers on a range of ESG metrics. These instruments will be short-term fixed or floating-rate securities that mature in 397 days or less.

The Fund's investments will typically have a credit rating of least A-1 or P-1 (or its equivalent) from a recognised credit rating agency.

The Fund can invest in a range of short-term securities, instruments and obligations.

The Fund is classified as a Low Volatility NAV Money Market Fund under the European Union Money Market Fund Regulations.

The Fund's primary currency exposure is to Pound Sterling.

The Fund does not have a specific sustainable investment objective, although shall seek to identify issuers that are better at addressing ESG risks, and assign ESG scores and screens to create a 'best in class' universe of issuers.

See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The Fund's objective may not be achieved in adverse market conditions. During times of very low interest rates, the interest received by the Fund could be less than the costs of operating the Fund.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
