

HSBC Global Funds ICAV

Multi Factor US Equity Fund

Marketing communication | Monthly report 30 June 2025 | Share class AC

Investment objective

The Fund aims to provide long-term capital growth.

Investment strategy

The Fund is actively managed.

In normal market conditions, the Fund will invest at least 90% of its assets in shares (or securities similar to shares) of companies incorporated in the US or those that earn the majority of their revenue from the US.

The Investment Manager identifies stocks which may or may not comprise the S&P 500 Index (USD Net Total Return), and uses a proprietary quantitative investment process to create a portfolio which focuses on risk premia offered by exposure to factors such as value, quality, momentum, low risk and size.

The investment approach is subject to ongoing research regarding the above factors. A portfolio is then created which maximises the exposure to the highest ranked equity securities based on the above factors while minimising the portfolio's risk.

The Fund may hold cash and money market instruments, invest up to 10% in other funds and up to 10% in total return swaps.

See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
