

HSBC Global Funds ICAV

US Corporate Bond UCITS ETF

Marketing communication | Monthly report 30 June 2025 | Share class XC

Investment objective

The Fund aims to provide income and capital growth.

Investment strategy

The Fund tracks as closely as possible the performance of the Bloomberg US Corporate Bond Index (total return) (the Index). The Index is a rules-based benchmark that tracks the investment grade, fixed-rate, taxable corporate bond market. It includes US Dollar (USD) denominated securities publicly issued by US and non-US industrial, utility and financial issuers. The currency of the Index is USD and returns are unhedged. The Index is based on the Bloomberg Index Methodology which applies an eligibility criteria based on a set of fundamental core design principles which are designed to accurately and comprehensively measure the underlying Index constituents. The Fund is passively managed and may invest in corporate investment grade bonds (developed and emerging markets), and other bonds all of which are Index constituents. The credit ratings of the Fund's underlying investments may vary from time to time. The Fund will utilise an investment technique called optimisation which seeks to minimise the difference in return between the Fund and the Index. The Fund will not necessarily invest in every constituent of the Index. The Fund will not invest more than 10% of its assets in other funds. See the Prospectus for a full description of the investment objectives, Index and derivative usage.

Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.

Share Class Details

Key metrics

NAV per Share	USD 10.21
Yield to maturity	5.07%

Fund facts

UCITS V compliant	Yes
Dividend treatment	Accumulating
Dealing frequency	Daily
Valuation Time	23:00 Ireland
