

HSBC ETFs PLC

HSBC BLOOMBERG GLOBAL SUSTAINABLE AGGREGATE 1-3 YEAR BOND UCITS ETF

Monthly report 31 March 2024 | HAGS LN | USD

Investment objective

The Fund aims to track as closely as possible the returns of the Bloomberg MSCI Global Aggregate 1-3 SRI Carbon ESG-Weighted Index (the Index). The Fund will invest in, or gain exposure to bonds issued by sovereign which make up the Index. The Fund qualifies under Article 8 of SFDR.

Investment strategy

The Index is a subset of the Bloomberg Global Aggregate 1-3 Year Index (the Parent Index), and is made up of investment grade, fixed-rate bonds maturing in 1 to 3 years from both developed and emerging markets issuers, as defined by the index provider. The Index seeks to achieve a reduction in carbon emissions and an improvement in the MSCI environmental, social and/or governance (ESG) rating against that of its Parent Index. The Index identifies securities based on sustainability exclusionary criteria include: issuers involved in business activities, such as, alcohol, gambling, civilian firearms, fossil fuels, controversial weapons, and revenue from thermal coal. The Fund is passively managed and utilises an investment technique called optimisation. The Fund may invest up to 30% in total return swaps, up to 30% in securities traded on the CIBM and may invest up to 10% in other funds, including HSBC funds. See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.
- To the extent that the Fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ("tracking error").

Risk Disclosure

- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
