

HSBC Global Investment Funds

Strategic Duration and Income Bond

Marketing communication | Monthly report 30 June 2025 | Share class AMFIXAHJPY

Investment objective

The Fund aims to provide long term capital growth and income by investing in a portfolio of bonds with an average duration expected to be between 3 years and 8 years.

Investment strategy

The Fund is actively managed. The Fund invests a minimum of 70% of its assets in investment grade and non-investment grade bonds and other similar securities which are either issued or guaranteed by governments, government agencies and supranational bodies of developed markets or by companies which are domiciled in developed markets. The Fund may invest up to 20% of its assets in non-investment grade rated bonds. The Fund will not invest more than 10% in securities issued by or guaranteed by any single sovereign issuer with a credit rating below investment grade. Issuers considered for inclusion within the Fund's portfolio will be subject to excluded activities in accordance with HSBC Asset Management's Responsible Investment Policies. The Fund may invest below 30% of its assets in asset backed securities (ABS) and mortgage-backed securities (MBS), up to 10% in contingent convertible securities, up to 10% in other funds; and may also invest in bank deposits, money market instruments or money market funds for treasury purposes. The Fund's primary currency exposure is to US Dollar (USD). See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
